SUMMARY

Final-year engineering student who has built and shipped three backend projects — one actively used by 500+ users in production. Proficient in Node.js, Express.js, JWT auth, MongoDB, and PostgreSQL with Prisma. Looking to bring real-world backend experience to various fields

SKILLS

- **Frontend** : HTML, CSS, JavaScript, Tailwind, React, Vite, Next.js
- **Backend** : Node.js, Express, REST, JWT, OAuth, Railway, Render, Docker.
- **Database**: SQLite, PostgreSQL, MongoDB and Prisma **Tools** : Git, WSL(Fedora), GitHub and Figma

EDUCATION

Bachelor of Engineering (CGPA of 7.5) Sri Sairam Engineering College

Jun 2022 - Present

PROJECT

CANSAT GUI (Repo) A National level competition conducted by ISRO at Uttar Pradesh

- Designed a real time GUI to visualize telemetry data received from a Cansat via Raspberry pi through XBee communication and Yagi Uda Antenna
- Worked closely with hardware components (serial communication, data parsing) to ensure reliable Data display.
- Tech : Node.js , Socket.IO, JavaScript, GitHub, Chart.js, Leaflet.js, HTML, Tailwind CSS

FTTA (Faculty Time Tracking Application) (FTTA & Repo) : An application developed for a private institution to monitor their Faculties and Students.

- Built a full-stack session tracking system where faculties scan QR codes to log session start/end, with an admin dashboard to monitor activity and assign faculties to students.
- Implemented secure authentication using JWT, OAuth 2.0, Google Cloud Console, and Passport.js — scoped exclusively to institutional email accounts.
- Automated session cleanup and scheduling using cron jobs, and enforced security best practices via helmet, cors, and environment-based config.
- Deployed using Docker, Railway and Vercel — currently live and actively used by 500+ users.
- Tech: Node.js, Express.js, React + Vite, PostgreSQL, Prisma, JWT, OAuth, Passport.js, Docker, Railway, Vercel

IMDF – Image Metadata Filter (IMDF & Repo) A backend-only REST API service for uploading, storing, and filtering images based on metadata.

- Designed and built a RESTful API to handle image uploads, extract metadata, and return filtered results based on query parameters.
- Secured endpoints using JWT-based authentication and applied security hardening with helmet and cors middleware.
- Integrated Multer for file handling and MongoDB for metadata persistence, deployed to Render.
- Tech: Node.js, Express.js, MongoDB, Mongoose, Multer, JWT, Helmet, Cors, Render

INTERNSHIP

Frontend Developer Intern at L&Q Technologies , Bangalore

June 2024 - July 2024

- Gained practical exposure to Angular's component-based architecture and applied it to UI development tasks in a real-world team environment.
- Tested and validated REST API endpoints using Postman, identifying edge cases and contributing to quality assurance discussions.

Command & Data Handling Team Lead , STIC (Sairam Techno Incubation Centre)

June 2025 - July 2025

- Led the C&DH team for a national-level ISRO CanSat competition — recruited members, assigned roles, and managed collaborative development workflows via GitHub.
- Designed and built a real-time GUI for telemetry data visualization, coordinating with Payload, Communications, ADCS, and Mechanical subsystems to ensure accurate data output.
- Presented the satellite, antenna, and GUI to a judging panel comprising ISRO scientists, IN-SPACE officials, and government ministers at the national finals in Uttar Pradesh.
- Awarded a Grade A (Excellent) national-level certificate by IN-SPACE.
